

DocBot

The project DocBot is based on a simple issue of fixing an appointment with a doctor.

In situations like fixing an appointment with a doctor can sometime be mischievous and is a time consuming piece of work.

Suppose if we are fixing an appointment with a doctor that does medical practice for a limited period of time in a particular day.

This work flows along the below flowchart:-

From the above flowchart we can observe that
“There is always an uncertainty of not getting an
appointment.”

We can be lucky if we got one but in case we didn't get
any?

Wastage of Fuel and Time.

Our project will allow the user to book an appointment with
a doctor from the comfort of their home on WhatsApp.

They would be required to enter some details and then the
Bot will tell them whether the slot is full or not.
